Safety Instructions

Installation

🚫 **Do not arbitrarily install or repair the product.**
The warranty does not apply to any product damage caused by an arbitrary installation or repair.

🚫 **Use the power adapter provided or one for 12V 0.5A or above.**
When sharing the power with other devices such as electric door lock, check the power capacity considering power requirements for each device. If appropriate power is not used, it may not operate normally.

In Use

⚠️ **Endure that password does not exposed to unauthorized individuals. Frequent change of password is recommended.**
Any illegal access your product may happen.

🚫 **Be cautioned for the fingerprint contact area not to be contaminated or damaged by dirty hands or foreign materials.**
It may affect fingerprint recognition performance or cause a failure.

🚫 **Do not forcibly press the buttons of the product and avoid any contact with sharp object to the device.**
It may cause a failure.

❗ **Do not clean the device with any form of liquid. Use soft and dry cloth only.**

① LCD Display

② Key Pad

③ LED Lamp

④ Fingerprint Touch Area

(5) RF Card reading part

No.	Name	Description
1	LCD Display	The operation status is displayed.
2	Key Pad	0–9 Buttons: Used to enter the ID and password. < > Arrow Buttons: Used to move the selected item. OK Button: Used to select the desired function. MENU Button: Used to enter or exit the menu. ESC Button: Used to exit from the menu or cancel the desired action.
3	LED Lamp	The operation status is displayed with an alert sound. – Green (Sound: beep beep beep beep!): Authorization success – Red (Sound: beep beep beep!) : Authorization failure – Pink (Sound: beep!) : Processing – Blue and Yellow blink in turn at an interval of 2 seconds (No sound): No IP address is given because DHCP is set in TCP/IP Setup – Blue and Sky Blue blink in turn at an interval of 2 seconds (No sound): Normal operation – Red and Pink blink in turn at an interval of 2 seconds (No sound): Device locked or no administrator – Blue and Red blink in turn at an interval of 2 seconds (No sound): The time is reset due to battery discharge. – At first use, Red blinks at an interval of 2 seconds (No sound): Initialization error, Consult with the manufacturer. – In normal use, Red blinks at an interval of 2 seconds (No sound): On the watch. – Yellow blinks shortly (No sound): Entry standby or in communication for getting an IP when DHCP is set in TCP/IP Setup
4	Fingerprint Touch Area	Used to input a fingerprint for authentication.

1.3 Methods for fingerprint input

BioLite Net can easily recognize fingerprints even though the angle and location of the pattern change. However, it is recommended to properly input fingerprints for more precise recognition.

Selecting a finger on fingerprint enrollment

Up to two fingerprints can be enrolled for each user in preparation of any abnormal situation like having a wounded finger or carrying an object with a hand.
In the case of a low recognition, the user can register the same fingerprint twice to increase the recognition rate.
It is recommended to use the index or middle finger.
In case of other fingers, the recognition rate decreases because it tends to be more difficult to place the finger in the center of the sensor area.
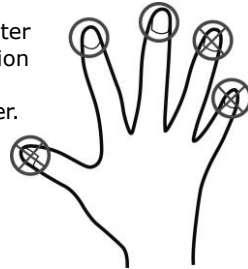

How to proerply place a fingerprint

Place your finger firmly on the sensor area.
Adjust the finger so that its middle position can be located in the center of the sensor.
When the finger is vertically placed or its angle goes astray, the recognition may be a failure.

When enrolling your fingerprint, the first finger input window prompts. Then register the desired finger on the terminal as shown in the figure below.
When the re-entry window appears with a "tick" sound, re-enter the previously enrolled finger. The fingerprint input is made twice.
(Gently push your finger on the sensor to have a full fingerprint.)

Place the first
Finger
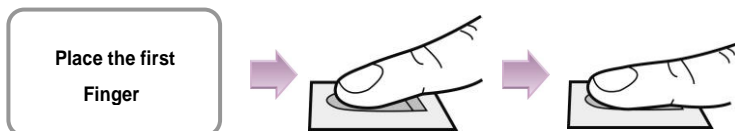

Note

In case fingerprint is not recognized normally

BioLite Net is designed to normally operate regardless of weather change or the angle and location of the fingerprint to place.
However, the recognition rate may vary depending on the external environment or fingerprint condition.

In abnormal cases, follow the directions below:
1. Retry after drying the wetness of your finger.
2. When your finger is too dry, retry after blowing on your fingertip.
3. When you have a cut on your registered finger, register another fingerprint.

Caution

Cautions while registering your fingerprint

The initial fingerprint registration is important.
Because the recognition process compares the scanned fingerprint with the registered one, an abnormally registered fingerprint can cause a failure.

To increase the recognition rate, follow the directions below:
1. Put the center of your fingerprint on the middle of the sensor.
2. If you have a cut in your finger or your fingerprint is not clear enough, retry with another finger.
3. When fingerprint recognition is in progress, do not move your fingerprint .

1.4 System setup procedure

Step 1	**Install the system according to the environment** - Grasp the locations for installation site, door open switch, dead bolt, and such. - Install the system (see 6.4).

Step 2	**Register an initial administrator** - Register the initial administrator for setting devices (See 1.4.1).

Step 3	**Configure the system** - Network configuration (see 1.4.2) - Stand alone configuration (see 1.4.3.) or Secure I/O configuration (see 1.4.4)

Step 4	**Test for system operation** - Check the door lock/unlock status and switch operation. - Deliver the setting items to the customer.

Step 5	**Configure the environment** - Configure various environments (see 1.4.5).

Step 6	**Register users** - Use the system after user registration (see 2.1).

1.4.1 Registering the initial administrator

There is no administrator set for the product in the initial status. So register an administrator for configuring the environments for relay, door open switch, door open detection sensor, and such.

1. When the product is connected, a window appears as shown in the right figure. Enter an ID and press **OK**.

> **Enter ID**
> **1**
> **Enroll Admin**

2. When the authorization mode window appears, use ◄ /► buttons to move to **PIN Only**, and press **OK**.

> **Operation Mode**
> ◄ **PIN Only** ►
> **Enroll**

3. When the password entry window appears, enter the desired password and press **OK**.

> **Enter PIN**
> ****
> **Enroll**

4. When the password re-entry window appears, enter the previously input password again and press **OK**.

> **Confirm PIN**
> ****
> **Enroll**

5. The completion message window appears.

> **Completed**

📝 Note

This procedure is necessary to temporarily configure the installation-related settings. Modify the administrator information after the installation is complete.

1.4.2　Network configuration

The network configuration is required to connect the dedicated PC software or other devices via network. Configure the settings according to the communication environment in your place.

[In case of configuring the network via Ethernet]

1. Connect the terminal to the computer that has the dedicated PC software according to the network environment after seeing "6.4.6 Connecting network."

2. Configure the settings for TCP/IP port and server according to the installation environment.

※ The following example explains how to directly connect the server PC without using DHCP.

Device	In/Out	Item TCP/IP In/Out
Use ◄ /► buttons to select the **Device** icon and press **OK**.	Use ◄ /► buttons to select the **In/Out** icon and press **OK**.	Use ◄ /► buttons to select the **TCP/IP** and press **OK**.

DHCP Not Use TCP/IP	IP Address 192.168.1.35 TCP/IP	Gateway 192.168.1.10 TCP/IP
Use ◄ /► buttons to set whether or not to use DHCP and press **OK.**	Enter the IP address and press **OK**.	Enter the Gateway using numeric and arrow buttons and press **OK**.

Subnet Mask 255.255.255.0 TCP/IP	Port 1471 TCP/IP	Server Use TCP/IP
Enter IP address using numeric and arrow button and press **OK**.	Enter Port and press **OK**.	Use ◄ /► buttons to select the **Use** and press **OK**.

Server IP 192.168.1.30 TCP/IP	Server Port 1480 TCP/IP	
Enter Server IP address using numeric and arrow button and press **OK**.	Enter Server Port and press **OK**.	**Cont.**

100Base-T support			Completed
◄ Not support ►			
TCP/IP			

Use ◄ /► buttons to set whether or not to support 100Base-T and press **OK**.

The completion message window appears.

> **Note**
>
> When you exit from the menu before completing the TCP/IP setting, the data is not stored so please finish the remaining steps until the setting completion message appears.

※**IP Address/Gateway/Subnet Mask Setup**: If DHCP is used, the values for IP address, gateway, and subnet mask are automatically assigned. Otherwise, set DHCP to **Not Use** and enter the corresponding values.
(When the right arrow is pressed, "." is entered while the left arrow deletes characters one by one.)

※**Server**: To directly connect the server of the dedicated PC software that enables monitoring and setting the terminal, use Server for its setup and enter the values for IP address and port number. (Refer to the dedicated PC software manual.)

※**TCP/IP Port, Server Port**: Should be the same values defined in the dedicated PC software. It is recommended to set the TCP/IP port to "1471" and Server to "1480." (When the port number is modified as you want, TCP/IP communication may not be active.)

13

[In case of configuring the network via RS-485]

1. Connect the terminal to the computer that has the dedicated PC software or to another device according to the network environment after seeing "6.4.3 Connecting Power & RS-485."

2. Configure the settings for RS-485 according to the installation environment.

Device	**In/Out**	**Item** **Serial Conn.** **In/Out**
Use ◄ /► buttons to select the **Device** icon and press **OK**.	Use ◄ /► buttons to select the **In/Out** icon and press **OK**.	Use ◄ /► buttons to select the **Serial Conn.** and press **OK**.

Type **PC Conn.** **Serial Conn.**	**Baudrate** **115200** **Serial Conn.**	**Termination** **Not Use** **Serial Conn.**
Use ◄ /► buttons to select the **PC Conn.** and press **OK**.	Use ◄/► buttons to select **115200** for PC connection speed and press **OK.**	Use ◄/► buttons to select Not Use for termination and press OK.

Completed

The completion message window appears.

1.4.3   Stand-alone configuration

This configuration is required to use the device for stand alone purpose, which requires no communication with PC or other devices.

1. As shown in the figure, connect BioLite Net to respective switches.

Note

When you exit from the menu before completing the relay setup, the configuration is not stored so please finish configuration until the message "Complete" appears.

1.4.4 Configuring Secure I/O

This connects BioLite Net to Secure I/O.

1. Connect wires between BioLite Net, Secure I/O, and respective switches as shown below.

Note

For actual wiring, see "6.4 System Installation."

*2.* Configure the relay settings as shown below. (Based on the figure above)

Note

Follow the instructions below only when the dedicated PC software is not used. When using the software, refer to the software manual.

📝 Note

When you exit from the menu before completing the relay setup, the configuration is not stored so please finish configuration until the message "Complete" appears.

1.4.5   Configuring environment settings

◆ Settings for date and time: Set the values as "3.1 Date, Time."

◆ Fingerprint authorization related settings: Set the values after reading the case of fingerprint selection in "4.1 Authorization."

◆ Operation mode setting: Finish the setting after seeing the operation mode selection case in "4.1 Authorization."

1.5 Authorization methods

For changing the terminal authorization method, see the operation mode selection case in "4.1 Authorization."
To separately set the authorization method for each user, see "2.2 Editing a user data."
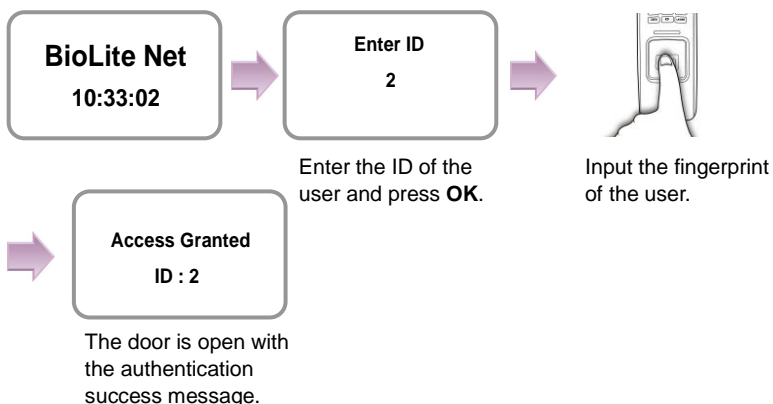

1.5.1 Finger Only

When the user authorization method is set to "Finger Only," you can open the door by using the three different methods:

1. Fingerprint recognition
2. Fingerprint recognition after entering ID
3. Fingerprint recognition after identifying user card

---

Fingerprint recognition

| BioLite Net | Input the fingerprint of | Access Granted |
| 10:33:02 | the user. | ID : 2 |

The door is open with the authentication success message.

Fingerprint recognition after entering ID

| BioLite Net | Enter ID | Input the fingerprint |
| 10:33:02 | 2 | of the user. |

Enter the ID of the user and press **OK**.

Access Granted
ID : 2

The door is open with the authentication success message.

Fingerprint recognition after identifying user card

BioLite Net
10:33:02

Place the user card on the
SUPREMA logo area.

Input the fingerprint
of the user.

Access Granted
ID : 2

The door is open with the
authentication success message.

1.5.2   Finger or PIN

When the user authorization method is set to "Finger or PIN," you can open the door by
using the five different methods:

1. Fingerprint recognition
2. Fingerprint recognition after entering ID
3. Password entry after entering ID
4. Fingerprint recognition after identifying the user card
5. PIN entry after identifying the user card

Fingerprint recognition

BioLite Net
10:33:02

Input the fingerprint
of the user.

Access Granted
ID : 2

The door is open with
the authentication
success message.

Fingerprint recognition after entering ID

BioLite Net

10:33:02

Enter ID

2

Enter the ID of the user and press **OK**.

Place the user card on the
SUPREMA logo area.

Input the fingerprint
of the user.

Enter PIN
****

Access Granted

ID : 2

Enter the password
of the user and
press **OK**.

The door is open with the
authentication success message.

1.5.4   PIN Only

When the user authorization method is set to "PIN Only," you can open the door by
using the two different methods:

1. PIN entry after entering ID
2. PIN entry after identifying user card

PIN entry after entering ID

BioLite Net
10:33:02

Enter ID
2

Enter Finger or PIN
****

Enter the ID of the
user and press **OK**.

Enter the password
of the user and
press **OK**.

Access Granted

ID : 2

The door is open with the
authentication success message.

24

PIN entry after identifying user card

BioLite Net **10:33:02**	→	**Enter Finger or PIN** ********

Place the user card on the SUPREMA logo area.

Enter the password of the user and press **OK**.

→ **Access Granted**
ID : 2

The door is open with the authentication success message.

1.5.5   Card Only

When the user authorization method is set to "Card Only," you can open the door by following the instructions below:

BioLite Net **10:33:02**	→	**Access Granted** **ID : 2**

Place the user card on the SUPREMA logo area.

The door is open with the authentication success message.
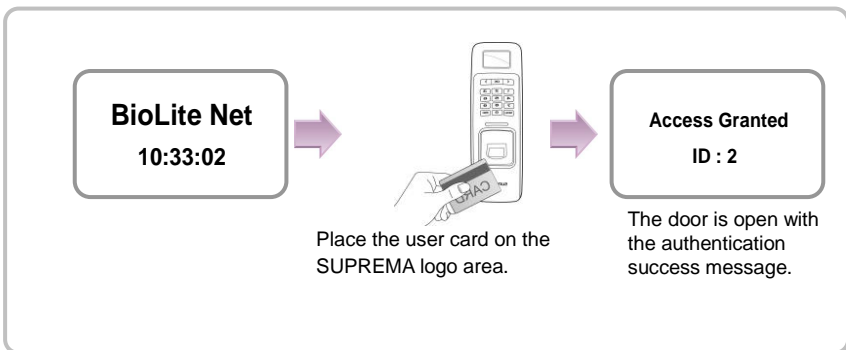

Note

For "Card Only," register the card user on the dedicated PC software first.

25

2. User Management

The user management and other environment settings can be updated after authorizing the registered administrator (see 1.4.1 "Registering the initial administrator").

2.1 Enrolling a user

2.1.1 Registration on the terminal

The information of a new user can be saved on the terminal.

1. Use ◄ /► buttons to select the **User** (⊘) icon and press **OK**.

2. Use ◄ /► buttons to select **Enroll** (⊘) icon and press **OK**.
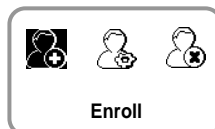

3. The ID that can be used appears. Use it or enter another ID and press **OK**.
(1–8 digit number)
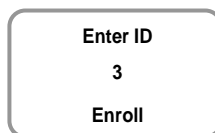

> ✎ Note
> ID is used to edit or delete the user data so please keep it carefully.

4. Use ◄ /► buttons to select **Device** on the **Enroll To** and press **OK**.
※ **You can save the user information (including finger print) on your terminal or card.**
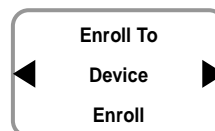

5. Use ◄ /► buttons to select a card ID entry type
and press **OK**.

　※**Not Use/Read Card/Manual Input/User ID**

📝 Note

This authorization method setting for each user has higher priority than the terminal setting that has been defined in **Device > Authorization > Operation Mode > Auth Mode**. Note that this function is applied to the case when the user enters ID or card and when **Use** is set in **Device > Authorization > Operation Mode > Private Auth**

※ **Authorization methods:** *Finger Only/PIN Only/Finger or PIN
/ Finger and PIN/Card Only/Per Device

- **Finger Only**: Only fingerprint is used.
- **PIN Only**: Only PIN is used.
- **Finger or PIN**: Fingerprint or PIN is used.
- **Finger and PIN**: Both fingerprint and PIN are used.
- **Card Only**: Only user card is used.
- **Per Device**: The mode set in "Device > Authorization > Operation Mode > Auth Mode" is used.

Changing the security level of the user

Item
◀ **Security Level** ▶
Edit

➡

Security Level
◀ **Normal** ▶
Edit

➡

Press **OK**.

Use ◀ /▶ buttons to select **Security Level** and press **OK**.

Use ◀ /▶ buttons to select a security level.

※ **Security Level**: *Per Device/Lower/Low/Normal/High/Higher
- **Per Device**: The security level in "Device>Authorization>Fingerprint>" on page 39 is applied.
- The higher the security level, the more sensitive the fingerprint recognition. But the authorization failure rate can increase.

Changing the fingerprint of the user

Item
◀ **Fingerprint** ▶
Edit

Use ◀ /▶ buttons to select **Fingerprint** and press **OK**.

➡

Place the first
finger

Place the first finger on the sensor.

➡

Place the first
finger again

Place the same finger on the sensor again.

➡

Place the second
finger
(Skip=ESC)

Enroll the second fingerprint in the same manner.
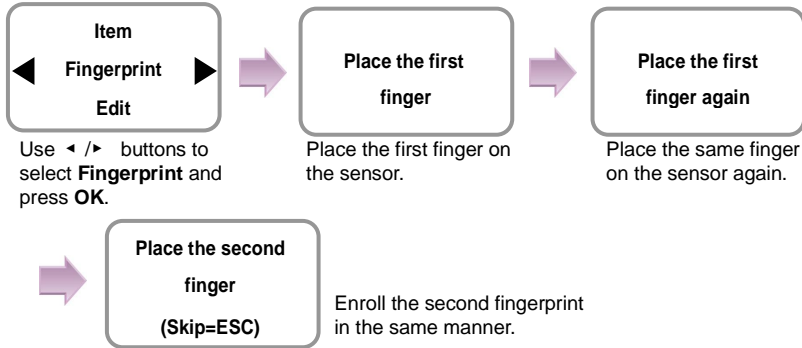

Changing the PIN of the user

Item
◀ **PIN** ▶
Edit

Use ◀ /▶ buttons to select **PIN** and press **OK**.

➡

Enter PIN
****
Edit

Enter the desired password and press **OK**.

➡

Confirm PIN
****
Edit

After re-entering the password of the user, press **OK**.

Changing the access group

Item
◀ **Access Group1** ▶
Edit

Use ◀ /▶ buttons to select any of **Access Group** and press **OK**.

➡

Select
◀ **Full Access** ▶
Access Group1

Use ◀ /▶ buttons to select access privilege for selected Access Group
*Full Access/No Access/Not Use/Or user designated Access Group
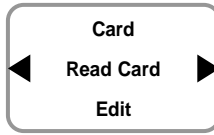

➡

Press **OK**.

Note

Setting the access groups other than Full Access or No Access is enabled through the dedicated PC software only. Using the terminal, you cannot add or edit them but only selecting them is enabled for each user.

33

Changing the card

Item	Card
◀ **Card** ▶	◀ **Read Card** ▶
Edit	Edit

Use ◄ /► buttons to select **Card** and press **OK**.

Use ◄ /► buttons to select card input type
* Not use/ Read Card/ Manual Input / User ID

Press **OK**.

※ **Card**: *Not use/Read Card/Manual Input/User ID

- **Not use**: Card is not used

- **Read Card**: User information is changed after touching a card on the terminal.

- **Manual Input**: User information is changed after entering the card ID.

- **User ID**: The corresponding user ID is changed using a card ID.
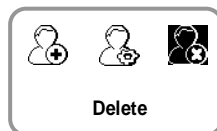

34

2.3   Deleting a user data

You can delete unnecessary user data.

1. Use ◄ /► buttons to select the User (👤) icon and press **OK**.
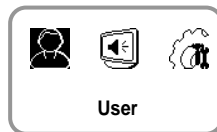

User

2. Use ◄ /► buttons to select the Delete (👤) icon and press **OK**.

Delete

3. After entering the ID or finger to delete and press **OK**.

Enter ID/Finger

4

Delete

4. When the action is successfully made, the message Deletion appears.
   ※The deleted user cannot be recovered.
   If necessary, enroll it again.
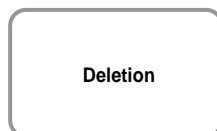

Deletion

✎ Note
- If all the users including the administrator are deleted, you must register the initial administrator again (see 1.4.1).
- When an administrator is deleted by mistake except normal users, the initial administrator registration step does not require registering normal users.

3. Configuration for Screen and Sound

3.1 Date, Time

You need to set the current system date and time.
After setting the date and time, the log data can store correct information.

1. Use ◄ /► buttons to select the **Screen, Sound** (▣) icon and press **OK**.
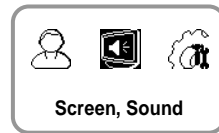

2. Use ◄ /► buttons to select the **Date, Time** (⏰) icon and press **OK**.

3. Enter the current date by following the suggested format and press **OK**.
For example, in case of November 15 in 2008, enter "20081115" and press **OK**.
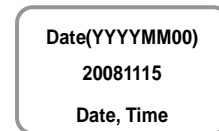

4. Enter the current time by following the suggested format and press **OK**.
For example, in case of 10:20 55 AM, enter "102055" and press **OK**.
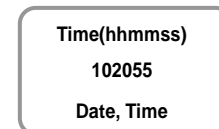

3.2   Backlight

1. Use ◄ /► buttons to select the **Screen, Sound** ([◄]) icon and press **OK**.
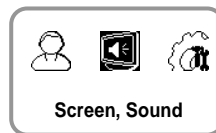

2. Use ◄ /► buttons to select **Backlight** ( ) icon and press **OK**.
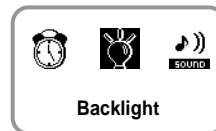

3. Use ◄ /► buttons to select a backlight operation status and press **OK**.

```
                              ┌─────────────────┐          ┌─────────────────┐
                              │       Item      │          │   Template Type │
                  ⟹          │ ◄ Template Type ►│   ⟹     │  ◄  SUPREMA  ►  │
                              │    Fingerprint  │          │    Fingerprint  │
                              └─────────────────┘          └─────────────────┘
                               Use ◄ /► buttons to          Use ◄ /►  buttons to
                               select Template Type         select template format
                               and press OK.                and press OK.
                                                            *SUPREMA/SIF
```

※ **Security Level**: The higher the security level, the more sensitive the fingerprint
                   recognition. But the authorization failure rate can increase.

※ **Image Quality**: It is the image quality level used when entering the fingerprint data.
                   In case of Low, the fingerprint can be easily input but the correct
                   authorization is not guaranteed.

※ **Sensitivity**: The higher the value, the more sensitive the sensor.

※ **Check Duplicate**: When enrolling a user, it determines whether or not to check the
                   fingerprint data is already enrolled.

※ **Fast Mode**: You can set the fingerprint recognition speed. If it is set to Fast,
                   the recognition accuracy may decrease.

※ **Scan Timeout**: You can set the terminal standby time for entering fingerprint.
                   If entry is not made within the specified time, the message,
                   'Entry time is over" appears.

※ **Matching Timeout**: You can set the maximum authorization time after entering fingerprint.
                   If this time limit expires, matching stops and the authorization fails.

※ **Template Type**: Format used in the terminal when identifying fingerprints (SUPREMA/SIF)
- SUPREMA: SUPREMA's own template format, SIF: ISO/IEC compatible template format
(To change the template format, there must be no fingerprint data stored on the terminal.)

In case of Operation Mode

Device

5. Attendance Management

5.1 Operating environment

When an event (attendance, leaving, return, and outside duty) is received from the terminal, it is reported to the server of the dedicated PC software. You can create a report from the events stored in the server.
With the dedicated PC software, you can also define new event other than the above-mentioned basic events and apply it to the report.
In case of basic events provided, each event causes the door to open. You can configure the settings according to the environment through the dedicated PC software.
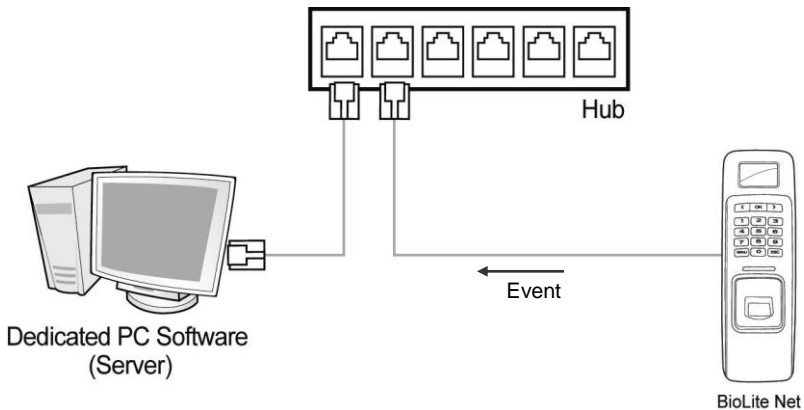

5.2   Setup for attendance management

1. Use ◄ /► buttons to select the **Device** ((🐇) icon
    and press **OK**.

> ☐ ☐ ☐
> **Device**

2. Use ◄ /► buttons to select the **Authorization**
    ((🗐)) icon and press **OK**.

> ☐ I/O ☐
> **Authorization**

3. Use ◄ /► buttons to select the **Operation Mode**
    and press **OK**.

> Item
> ◄ Operation Mode ►
> Authorization
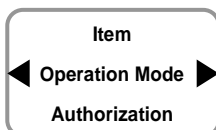

4. Use ◄ /► buttons to select the **Time
    Attendance** and press **OK**.

> Item
> ◄ Time Attendance ►
> Operation Mode
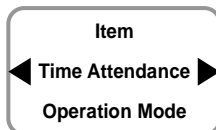

5. Use ◄ /► buttons to select the Operation Mode
    of Time Attendance and press **OK**.

> Time Attendance
> ◄ Key Input ►
> Operation Mode
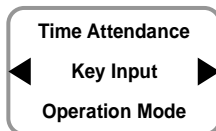

※**Operation modes**: *Key Input/Fixed/Manual/Auto/Not Use
 - Key Input: In usual time, the function is inactive. When ◄/► buttons are pressed,
                 you can select the attendance status. When a user authorization is successful,
                 the selected attendance log is recorded.
 - Fixed: A specific attendance status continues. When a user authorization is successful,
              the corresponding log is recorded.
 - Manual: The active attendance status appears on the screen and it can be changed
               using ◄/► buttons. Once it is changed, the status continues until another
               selection is made. Every authorization success makes the log recorded.
 - Auto: The active attendance status appears on the screen. Fore each time zone,
             the active attendance statuses are fixed.
 - Not Use: The function is not available.

5.3 Operation modes

5.3.1 Key Input

When the operation mode is set to "Key Input," this mode is used.

BioLite Net
10:33:02

Move to the desired
event by using ◄ /►
buttons.

Select
In
Type

Select the desired
event and perform
user authorization.

ID: 8
In

The door opens
with a confirmation
message.
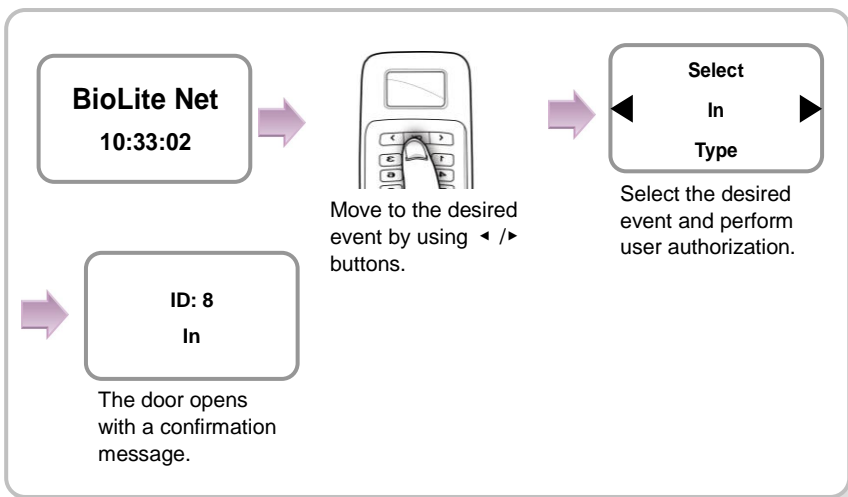

5.3.2 Manual

When the operation mode is set to "Manual", this mode is used.

In case of Manual

BioLite Net
10:33:02

Move to the desired
event by using ◄ /►
buttons.

In
08:30:43
12/01/2008

The desired event
appears.

In case of Manual

In
08:30:43
12/01/2008

ID: 8
In

The door opens with a confirmation message.

The Users identify the card or fingerprint according to the authorization method.
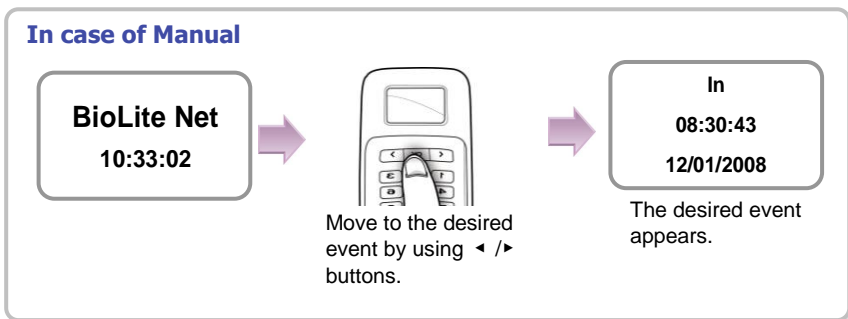

※ **Manual**: It is convenient to those who need to change an event type manually everytime they enter or leave..

5.3.2　Auto

When the operation mode is set to "Auto," this mode is used.
This mode can set the corresponding time zone for each attendance event through the dedicated PC software. Then the fixed event is set for the corresponding time zone.

BioLite Net

Device

In case of Auto

Out
18:35:55
12/01/2008

The event for the corresponding time zone appears.

The users identify the card or fingerprint according to the authorization method.

ID: 8
Out
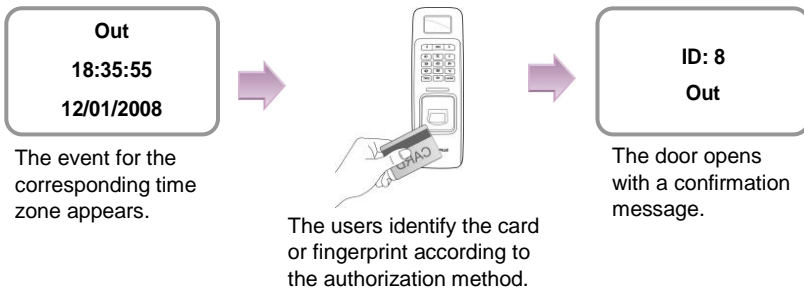

The door opens with a confirmation message.

※ **Auto**: While the event type and time zone are set through the dedicated PC software, you can totally use this mode for all the users who are entering or leaving.

5.3.3 Fixed

When the operation mode is set to "Fixed," this mode is used.

This mode is used after fixing the event through the dedicated PC software if required.

In this case, the setting can be changed only through the dedicated PC software and you cannot change the attendance event through the terminal.

| **Out** |
| **18:35:55** |
| **12/01/2008** |

The preset event appears.

The users identify the card or fingerprint according to the authorization method.

| **ID: 8** |
| **Out** |

The door opens with a confirmation message.

※ **Fixed**: This mode is available only when the desired event is set for all the users who are entering or leaving.
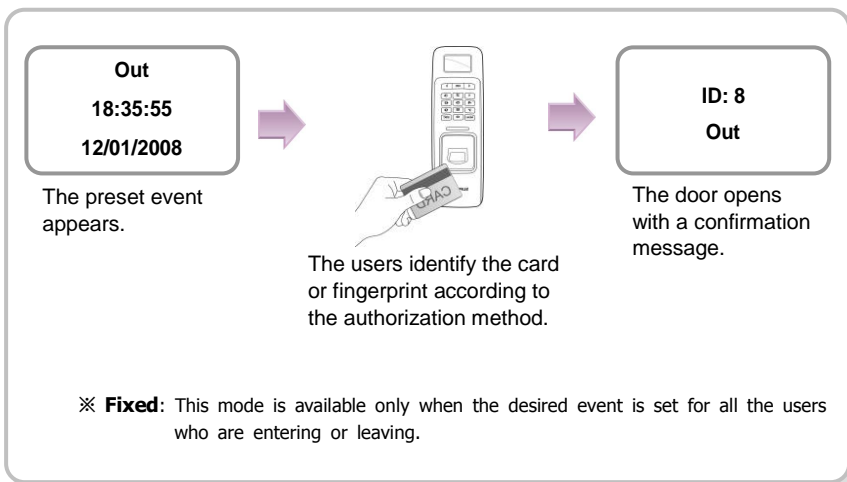

6. FAQ
6.1   Error messages

Error Message	Description
!Access Restricted	The authentication trial happens except for the allowed time zone.
!Cannot Change	A template already exists when you want to change the template format.
!Cannot Format	The card is not formatted due to improper card touch.
!Cannot Write	The user information is not saved due to improper card touch.
!Device Locked	The device is locked because the case has been open.
!Duplicate Card	The card has been already registered.
!Duplicate Finger	When enrolling a user fingerprint, the fingerprint that has been input already exists in the device (when checking the duplicated case).
!Duplicated Time	The time zone is duplicated.
!Failed	The number of users exceeds 5000, so you cannot enroll more users.
!Failed	The user ID to delete does not exist.
!ID In Use	The user ID to enroll already exists.
!Invalid Value	An invalid value is entered.
!Mode Error	The authorization mode is different from the setting.
!No Card	You tried authorization with a unregistered card.
!No Log	There is no log data.
!Not Administrator	A normal user tries to enter the menu.
!Not Authorized	The fingerprint authentication for the administrator fails when entering the menu.
!Not Matched	The entered fingerprint or password is not matched to the enrolled one. - In case of fingerprint entry, the entered two fingerprints of the same finger are different.
!Not Recognizable	The fingerprint data cannot be extracted due to wrong finger input.
!Time Out	The fingerprint data is not entered while the sensor is active.
!Unknown Finger	The entered fingerprint for entering the menu or editing/deleting a user data does not exist.
!Unknown ID	The user ID that does not exist in the device is entered.
!Wrong PIN	The entered password for authentication is not matched the enrolled one.

BioLite Net

F
A
Q
6.2 Troubleshooting

Category	Trouble	Solution
Power	The power is supplied but the device does not operate.	- When the device is disconnected from the bracket, it may not work when using the tamper switch. - Check the adapter or power cable.
Password	The password is lost.	- Enter the queried password after contacting the administrator in case of a normal user. - When the administrator password is lost, contact with the installation agency.
	The locked door is not open after entering the password and pressing **OK**.	- Check whether the correct password is input. - Check whether you have changed the password recently. - If you cannot find the password, contact the administrator.
Fingerprint	The fingerprint has been enrolled but its recognition encounters an error.	- BioLite Net has the technology of Suprema that won the first award in FVC2004 and FVC2006 because it has world number one quality in recognition. - For better performance in fingerprint recognition, correct registration is a must. - Enroll the fingerprint again after seeing "1.4 Methods for fingerprint input" - The recognition rate may vary due to the characteristic of each finger so enroll the fingerprint of another finger.
	It was good at recognizing fingerprints but suddenly it fails in recognition.	- Check whether the finger or the sensor is covered with sweat, moisture, or dust. - In case the fingerprint has any damage, the device may consider it as the one of wrong person. - Wipe the finger or sensor with a dry cloth and retry. - When the fingerprint is so dry, blow your steam of breath into it and retry.
Door lock	Even if you close the door, the door is not locked.	- The electric lock failure is most likely to happen. Check it after contacting the installation agency.
Time	The time is not correct.	- BioLite Net has an embedded battery but it can be discharged by a long time use. Accordingly the time may not be correct. Correct the time after seeing "3.1 Date, Time."
TCP/IP	The terminal data is not found by the dedicated PC software.	- Check the connection status after setting on the terminal like **Terminal > System > Wallpaper > Type2**. - When U is displayed: Check the LAN connection status. - When D is displayed: Check the IP address. If you set like **Terminal > In/Out -> TCP/IP -> DHCP Not Use**, the current IP address appears. If you use DHCP, the actual address received from the DHCP server appears. If the IP address is set correctly, check the port number.
Administrator connection	The administrator mode cannot be entered because of losing the administrator password or resignation.	- BioLite Net allows the administrator to give access rights so only the administrator can enter the menu. - When you have no choice but to enter the administrator menu, you can be granted an administrator password after following the predefined procedure. (Contact with the installation agency.)

6.3   Usage summary

※ It provides the mainly used functions.
※ � button: Used to select the desired function.

Function	Method for setting (Sequentially perform the following items.)
Initial administrator registration	Enter ID ➡ Enter password ➡ Enter password again
Date & time setting	Select **Screen, Sound** (🔲) icon ➡ Select **Date, Time** (🕐) icon ➡ Enter date ➡ Enter time
User registration	Select **User** (👤) icon ➡ Select **Enroll** (👤) icon ➡ Enter ID ➡ Select **General** or **Administrator** in Level ➡ Enter fingerprint or PIN
User password modification	Select **User** (👤) icon ➡ Select **Edit** (👤) icon ➡ Enter ID or fingerprint ➡ Select **PIN** ➡ Enter the desired password ➡ Enter it again
User fingerprint modification	Select **User** (👤) icon ➡ Select **Edit** (👤) icon ➡ Enter ID or fingerprint ➡ Select **Fingerprint** ➡ Enter the fingerprint of the user ➡ Enter it again
User authorization method modification	Select **User** (👤) icon ➡ Select **Enroll** (👤) icon ➡ Enter ID or fingerprint ➡ Select **Operation Mode** ➡ Select an authorization method
User deletion	Select **User** (👤) icon ➡ Select **Delete** (👤) icon ➡ Enter ID or fingerprint to delete
All user deletion	Select **Device** (🖥) icon ➡ Select **System** (🖥) icon ➡ Select **Delete User DB** ➡ Select **Delete**

6.4.2   Installing the bracket

1. Fix the bracket to the place where BioLite Net is to
be installed using the fixing screws.
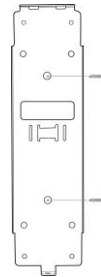

📝 Note

If the installation place is on concrete, drill holes, insert knife
blocks into the holes, and fix them by using fixing screws.

2. Install BioLite Net on the bracket.
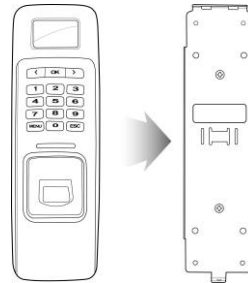

3. Fix BioLite Net and the wall mount bracket by
rotating the star-shape screw by the hexagonal
wrench.

6.6 FCC Notice

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures: ·

Reorient or relocate the receiving antenna.
Increase the separation between the equipment and receiver.
Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
Consult the dealer or an experienced radio/TV technician for help.

Modifications not expressly approved by the manufacturer could void the user's authority to operated the equipment under FCC rules.

Suprema Inc.
