

**BOSCH**

Invented for life

Bosch Home Control Service

Simplified automation of connected systems

Dealer Benefits

Grow your business by adding the G450 Home Control Gateway to B and G Series intrusion control panels

Demand for smart, connected systems is rapidly increasing. Your customers want easy control of their security and their homes or businesses with just a tap on their mobile devices. The G450 Home Control Gateway makes this simple with seamless integration of our B and G Series Control Panels and a range of wireless devices for homes and businesses.

Offer customized automation to your customers with connected systems that control security, lighting, heating, cooling and more, all from a smartphone or tablet.

Increased revenue

Bosch keeps your connectivity costs low to increase your growth potential. You get more recurring monthly revenue for your business through fees for home or business automation capabilities.

Easy to install

Adding the Home Control Gateway to a B or G Series Control Panel is fast and easy. No wires to run means a quick installation, and the visual scene-creation wizard makes customization simple.

Easy to use

Customers operate the system using the Remote Security Plus app or an Internet-connected computer. The app provides one-touch device control for common modes such as Home, Away, Night and Vacation.

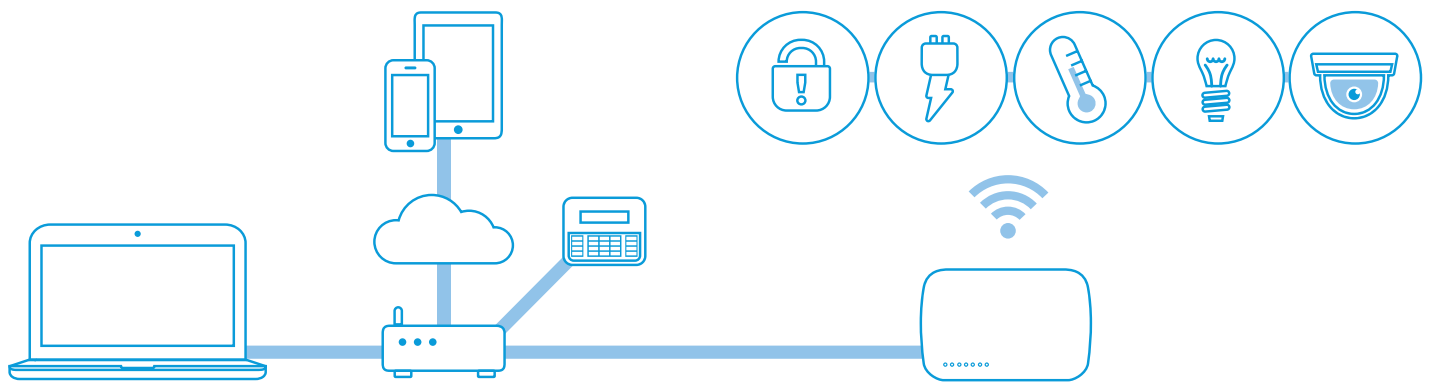

Supported devices

The G450 supports a broad range of wireless device protocols – Z-Wave, ZigBee, WiFi, and Bluetooth – to provide flexible, wireless control of internal and external lights, door locks, thermostats, blinds, and more. Combined with B and G Series Control Panels users gain a powerful solution that brings together the best in intrusion prevention, fire detection, automation and remote monitoring.

How it works

- ▶ B and G Series Control Panels connect to wireless devices using the G450 Home Control Gateway
- ▶ The G450 connects to a Wi-Fi router, broadband modem or wired hub to link all the devices with the intrusion control panel
- ▶ A user-friendly dashboard enables setup from a mobile device or Internet-enabled computer
- ▶ An accompanying Home Control service plan securely stores system data in the cloud

End-user Benefits

Feature	Benefit
Support for multiple wireless communications protocols	Works with a full series of Z-Wave, ZigBee, Ethernet, WiFi, and Bluetooth devices to offer a full suite of automation solutions
Visual scene-creation wizard	User-friendly interface simplifies customization to meet application-specific needs
Intuitive app for iOS and Android mobile devices	Easy user control of systems from anywhere.
Cloud storage service	Store and retrieve system data and video recordings in the cloud
Single, integrated system for security and automation	Combine security and automation events into single scenes
