

## Z4 G4 Workstations

### Hardware-accelerated GPU scheduling in Windows 10

If you use the Z4 G4 workstation to run BVMS on it, we strongly recommend that you turn on the hardware-accelerated GPU scheduling. This is to avoid that the TDR (Time-out Detection Recovery) feature is activated in case that opening many cameos would overload the system.

To turn on the hardware-accelerated GPU scheduling:

1. On the Windows **Start** menu, select **Settings**, and then select **System > Display**.
2. Under **Multiple Displays**, click **Graphics settings**.
3. Set the **Hardware-accelerated GPU scheduling** to **On**.
4. Restart your computer.
